

Recurring Cost Saving

**Reducing Opex Cost by implementing
Power Saving initiatives at Baggage
Handling System (T3)**

CIP/2018-19/867 DIAL

12 Steps Methodology of Problem Solving

“Reducing Opex Cost by implementing Power Saving initiatives at Baggage Handling System (T3)”

- ❑ At DIAL, the Baggage Handling System is almost 7kms long with 5 levels of screening, handling 135,000 bags per day.
- ❑ Aligning our goal with DIAL Mission: We had planned to Reduce our Energy Consumption by some innovative method or process improvement.
- ❑ Daily Average Energy consumption @BHS: 19MWH/day

Listing Prioritizing Problems

Project Definition Diagnostic Journey Remedial Journey Holding The Gains

Venue	T3 BHS Meeting Room
Date	30 th June 2018
Team Leader	Mr. Sunil Sharma (SS)
Team Members	Mr. Ayush Yadav(AY), Mr. Pawan Kumar(PK), Mr. Vijay Jain(VJ), Mr. Gopal Kaushik(GK).

S. No.	List of Issues	SS	AY	PK	VJ	GK	TOTAL
1	Higher IDLE TIME of BHS conveyors.	5	5	3	5	4	27
2	Improper baggage induction from Airlines.	4	4	1	4	5	21
3	Under utilization of Redundant BHS lines.	5	5	4	4	2	20
4	Ever increasing list of "DG" items from BCAS.	2	3	2	3	2	13
5	Higher baggage rejection for security reasons.	4	1	2	1	2	10

Marking 1 – 5

- 1 – Least priority.
- 5 – Highest priority work.

DGCA Latest list of Prohibited article in Check-In Baggage

Government of India
Office of Director General of Civil Aviation
Opposite: Safdarjung Airport, New Delhi – 110003.

PUBLIC NOTICE

17th October, 2016

Subject: Prohibition for use of Samsung Galaxy Note 7 Mobile Phone on Board Aircraft.

In the light of recent incidents involving Samsung Galaxy Note 7 devices, travelling public and airlines are advised to ensure that there is no carriage of Samsung Galaxy Note 7 smartphone devices on board including as checked in luggage/cargo on any aircraft on flights to, from or within India.

This supersedes public notice dated 28th September 2016 on the above subject.

(B.S. Bhullar)
Director General of Civil Aviation

Ban on Mobile Phones

DGCA
@DGCAIndia

Message from the Director General of Civil Aviation

Consequent upon the recall of a limited number of older generation 15-inch MacBook Pro laptops by M/s Apple Inc. (sold primarily between September 2015 and February 2017) due to fears that their batteries may overheat and pose a safety risk, DGCA requests all air passengers not to fly with the affected models either as hand-baggage or checked-in baggage until the battery has been verified/certified as safe or replaced by the manufacturer.

Ban on Laptops

Addition of new items in the List of “Dangerous Goods” increases the travel time of bags.

S. No.	Problems
1	Conveyors "Idling Time" was high.
2	Under utilization of Redundant lines.
3	Higher baggage rejection due to improperly inducted bags from Checkin.

Probable Solutions

Project Definition

Diagnostic Journey

Remedial Journey

Holding The Gains

1 →

Upgrading to ICS (Individual Carrier System)

2 →

Revising conveyors "Idle Time" settings from 7mins to 1min

3 →

Extensive usage of "Redundant Lines" during peaks times

4 →

Monitoring "Baggage Rejection Trend" with in-Line Security

5 →

Providing necessary BHS trainings to Airlines & GHA's

Probable Resistance and Remedies

S. No.	Agency	Expected Resistance	Remedy	Responsibility
1)	Siemens	Changing PLC protocols at a live airport.	Controlled environment created at Metro line for PLC changes.	Siemens/ DIAL BHS
2)	Airlines GHA	Following proper baggage induction procedures at Checkin.	Necessary trainings imparted to all Airlines & GHA staff.	DIAL BHS
3)	DIAL	Usage of “Redundant Lines” during non peak hours.	Monthly Score card system devised capturing individual performance.	DIAL BHS

Implementation Steps

Project Definition

Diagnostic Journey

Remedial Journey

Holding The Gains

Developed new Logic at PLC level for reducing the “idling time” of Conveyors

Observed system behaviour for 2 weeks.

Trainings imparted to Airlines Staff on Proper Baggage Induction procedures.

Created a test environment at Metro line to ascertain the potential impacts.

Post successful results, same logic implemented phase wise at the entire conveyor length of 7 kms.

Ensured extensive usage of “Line diversion” for atleast 16 hours per day

The
Gains

01

Recurring annual Savings of INR 1.4 Cr.

02

Half yearly savings for FY 18-19 is INR 78 Lakhs (06 Months).

03

Regular review of revised “Idle Timings” of all conveyors.

04

Sharing monthly system logs with Siemens Germany for joint analysis.

05

Daily monitoring of “Line diversions hours” via individual scorecard system.

06

Imparting regular BHS trainings to Airlines & GHA’s for DO’s & DON’T’s.

07

Horizontal deployment advised to all Group Airports.

08

Taking que from DIAL, Dubai airport has decided to replicate this model at there existing terminal and the proposed new Airport (*AL Makhtoum*).

Shared details with Hyderabad Airport (Mr. Jai Raju- Head Airport Systems)

Shared details with Goa Airport (Mr. Hemant Apte- Head Airport Systems).

Also, seeking Management approval to share this idea with AAI leadership for necessary deployment at 300 Airports run by them.

Each airport has atleast 1 Km of conveyor length, even then the collective recurring savings for AAI would be 50Cr per annum.

• Delhi Int. Airport	 6.8 Km	₹ 1.4 Cr
• Dubai Int. Airport	 84 Km	₹ 17 Cr
• Al Muktoum Dubai Airport	 650 Km	₹ 130 Cr

☐ Taking que from DIAL, Dubai airport has decided to replicate this model at there existing terminal and the proposed AL Makhtoum Airport.
